Barry Announces Pulsed Power Termination & Resistor Line

Attleboro, MA 02703 - Barry Industries announces their line of Pulsed Power Devices specifically designed for hi-rel, thermally cycled devices.

Devices are derated up to 250 degrees C. These terminations and resistors are ideal for use in solid state laser technology, and plasma RF generators that have an operating frequency of 13.56 MHz.

Established in 1977, Barry provides a full line of Power and Precision Thick Film resistors, terminations and attenuators on Alumina, BeO, BeO Free™ and Aluminum Nitride for your microwave and RF applications.

Barry also has an LTCC multilayer foundry, design and production facility for products to 65 GHz. High Power Ceramic Packages, Machining and Electroplating – a vertically integrated company.
